## 330 STUDENT PLACEMENT

The Board of Education believes in providing the opportunity for meaningful achievement and participation for all students.

Students with special needs should be provided with the opportunity to be placed in a classroom in their neighbourhood school with their age-appropriate peers unless the educational needs of that student or other students within the school indicate that the educational program should be provided otherwise.

The Board believes that promotion or retention of any student should be based on the professional judgment of what is best for the student considering their intellectual, social, physical and emotional needs.
